

## My New Dark Box

My new Jardin dark box is mobile and works very well in full daylight. Dimensions are 36x24x24. Below is a link to the box itself at Amazon. For the dark cloth, I used black out curtains from a local curtain place. I tacked individual sheets together with Beacon Fabri-tac glue. The tops of the curtain are connected by an adjustable length bungee chord which is pulled tight at the back of the box with the box inside the shroud. It is open on the bottom as the box sits on it. I just pull it over myself and pull it tight around myself. The plate holder you see inside is a new Jody Ake 5x7 plate holder.

Advantages of this box are: It is compact, light and can be assembled in a matter of minutes. For now I prefer to leave mine assembled. Depending on what dimension box you use, it will fit into the back of your vehicle. Looking for a larger size? Jardin makes a variety of sizes up to and including small room sizes.

## INside lighting

For my primary inside lighting, I simply cut out ruby lith discs and covered the LCD lites using super glue.. These overheads are nice. They swivel and have directional movements as well as a dimmer switch. It takes 6 AAAs. I mounted it on a wood cross bar which fits nicely across the top of the box and slides front to back. This allows me to put the light where I need it most. Here's the link to the product.
